Travel Radio Australia and we're here at the ANZ DMC which is the Australia New Zealand Disaster Management Conference on the Gold Coast and we have two very fascinating people here. We have Christopher Anderson and Kate Coxall and Christopher and Kate are from a great company called Prodigy Wildfire Solutions and if you've ever been in a bushfire situation you know you've got to be prepared and these guys can help you do it. Christopher and Kate welcome to the program.

Thanks for having us Geoff. Thanks so much Geoff. Kate first of all can you tell us a bit of an overall background about your Prodigy Wildfire Solutions because it's a great company and you do some great things.

Thank you so much absolutely. So we work in the space of preparedness supporting people across the country to prepare their property whether it's a home, business, commercial property to be bushfire risk resilient. So that means that their their homes and their properties have sprinkler systems on their roofs in a water curtain design protecting them from ember threats.

So up to 90% of properties are actually lost not from fire front but from ember. What our systems do is they wet down the perimeter of the property in a water curtain fashion. They wet down the roofs and they reduce that risk by not allowing the embers to land and ignite.

We also offer passive protection solutions and we we talk to our communities about ways that they can protect their properties much better and reduce that risk whether it's defensible space or using special ember proof mesh in places where there are ember highways. All of our systems are custom designed for every single property and and their specific needs and solutions. They're also designed to above the CSRO best practice guidelines so to be fully reliable with using marine grade stainless and copper and different parts of our system so that when the fire does approach that system's going to be running and it's going to be able to switch on.

We also partner with Amber Argus and use their automation design which means that there is it's like a firefighter sitting on your roof 365 days a year seven days a week with a 360 degree view that actually detects the threat. It's a flame sensor so it sees that flame and it cycles the water so that you don't actually run out of water in case of that threat. Now Christopher Anderson from Prodigy Wildfire Solutions, what is your role in this? What do you do? Do you create the actual hardware to put into the systems? Yeah so I'm the managing director of Australia and we're a global company so we're also in the USA and Canada.

I'm the chief designer engineer so I design the the custom systems based on the perimeter of the property, the infrastructure the customer has and needs to build the most resilient system that they can have. As Kate's already mentioned we have automation, we have remote activation, we also have the Prodigy Wildfire app which has a couple of functions. One is Ember Watch which

basically gives the customer live data from the bushfire movement to the weather patterns so the customer can make an accurate decision around evacuation where the where the fire is moving how the the wind is affecting the embers and how they're pushing towards their property and then we also have another function called smart cycles which allows you to decide what your run time is based on the type of property you have the amount of water you have and the type of threat that you're experiencing at that point in time so that links into a remote activated valve that we have as well.

Yes I'm just looking at your products here and they're very extensive they're beautiful stainless steel brass systems that go on you know it's all waiting because as we know these fires and can happen very very quickly out of the blue it's really good for them to be prepared well ahead of time. Absolutely Jeff and we know that it's not just the fire front that we're protecting from so embers can travel over 20 kilometers from that fire front and create that risk so a lot of people unfortunately are lulled into a false sense of security if they're in an outer suburb thinking that they're they're safe because that fire front may not impact them similar you know we have a lot of primary producers who may be surrounded by grasslands but but grass fires can travel very very quickly and it's so can embers they can travel very far and very quickly so our systems mitigate against that risk and we're here spreading the message because a lot of people in Australia aren't aware that that they can actually take that risk reduction into their own hands we're not competing with the insurance companies who unfortunately when people do lose their properties come in at at the end and and you know might help you rebuild what we're doing is we're putting that security in in people's hands where they can actually prepare against that loss and they can evacuate early and know that even though they've evacuated their property is still going to be there standing at the end of it. And the best time to do this is well ahead I've got quite a few months ahead of the bushfire season and and we've just noticed in European summer of 2026 there's been massive problems in Europe and we're and we're actually heading into an El Nino this coming summer so it'll be great for people to get in contact with you guys.

Yeah absolutely we're really trying to get people to put these systems in in winter because we do get an influx sort of spring and and summer so it is really good to be prepared not to wait until the fires are you know on your doorstep. And how can people find out more about Prodigy you've got a great website that people can find out everything there. If people go to prodigywildfire.com we highly recommend they take four minutes to do the free bushfire risk assessment that will actually give them the the risk for their specific property and it will give them a whole heap of information and to get in touch as soon as they possibly can to find out more about how our systems can support them to reduce that risk.

Thank you. Christopher and Kate from Prodigy Wildfire Solutions it's been great having you on the program and preparedness is is number one thing. Thank you very much.

Thanks Jeff. Thanks Jeff.
