SERGIOFARRARIEDITFRIGOICE

Travel Radio Australia. We are here at the Magnificent Muppic exhibition in Cannes in France and I have with me Sergio Ferrari from Italy and Sergio Ferrari is with a great company called Industrial Frigo Ice and they make some magnificent ice attractions like ice slides. It's all sorts of things.

Sergio welcome to the program. Nice to meet you. Welcome to Cannes.

Thank you for this opportunity. Sergio, I'm just looking at some of the magnificent structures that you build all around Europe and around the world with the Industrial Frigo Ice. Tell us about some of the things that you do and tell us about the company itself.

Well, I'm Sergio Ferrari from Industrial Frigo. I'm the sales manager of the company. Industrial Frigo is an Italian-based manufacturer establishing the 70s which first business was the manufacturing of chiller for industrial applications especially plastic, rubber, food and beverage and after that about 20 years ago we developed a new business which is the ice and snow industry.

As a manufacturer of chiller we started to manufacture also ice rings ice lights and then also snow making machines. We are able to set up different layouts for either permanent or temporary installations and so we can create a nice and snow park especially for shopping malls where we can put together an ice rink, an ice light and a snow pit. For Christmas times it's really loved by kids and families.

Our main business is developed in warmer countries like Central South America and Southeast Asia. In Australia it's a country that we would like to step in as soon as possible. We have already many customers but for the industrial business unit and we hope soon to get our first ice rinks there.

When we say ice rinks these are ice rinks on steroids because you have so many fabulous variations that you can make you can make the I'm just looking here you've got those magnificent inner tubes that people can sit on and go through you know real snow it's real ice and snow isn't it? Yes, it's real ice and real snow at the positive temperatures because we can set up our equipment into a shopping mall so that means 22-23 Celsius or 75 Fahrenheit for the imperial guys and that's it. It's an easy setup. We can set up a nice park of let's say 10,000 square foot in a week and then you can enjoy for as much week as you want and then in just three four days we can dismantle and keep it back waiting for the next season.

Yeah, I know here in Caen they have the Christmas markets here and they have a big ice rink there and it's so popular with the families and the kids and everything they go absolutely crazy. Tell us about some of the existing places that you're in at the moment. Of course, Italy is our main important market for the temporary installations.

Most of the countries in Europe we install ice rinks in the main squares of the cities, different sizes of course and then we build the Christmas village. If you pass by Rome next winter you will see in Villa Borghese a nice park with our attractions. There will be two ice lights and two ice rinks.

A Christmas village that is really amazing. In the UK we have some offices also in Birmingham I would say. There is an important Christmas village in the main square.

There will be ferries, there will be many other rights and also our icing. In Australia of course we have our ski resorts, we have nine ski resorts and we've just had a season which hasn't been the best and I'm interested that you are also into snowmaking and that's a big market for you. Yes, our snowmaking it's a bit different I would say from the snow domes because snow domes they have a system designed to work at negative temperatures.

So our system is developed to work at positive which is you know a peculiarity that make us different than others. But of course in snow domes you need a perfect quality snow so we target a different client in the case. We target mainly skiers which something really perfect.

In our case we are targeting families and kids so they need some snow to play and make you know castles like on like in the beach it would be in the beach so it's a bit different but we also provided snow our snowmaking to negative venues but again not for ski slopes but mainly for snow parks. Snow play yes, snow play they call it. What's your background Sergio? You said you were in hospitality before and this takes you all over the world I suppose.

I studied industrial engineering I jumped into a mechanical industry in Italy but I found it too boring so I said why not don't use this let's say background and and try to to get some fun so so we combine the engineering mechanical engineering coming from the chillers and snow making plus the the fun from coming from the the rights. And how can people find out more online about industrial free go ice? You can find on on our website of course but we also have our YouTube channel you just have to tap industrial free go ice channel that's it and you can find a lot of videos and enjoy the watch. Great thank you so much Sergio for this fascinating insight into these magnificent ice parks and snow play areas ice rings this is what these guys do it's a magnificent service for shopping centers all sorts of attractions all around the world.

Sergio thank you for being part of the program. Thank you so much thank you to your public.
